

A scatter plot on a black background showing 100 data points represented by triangles. The x-axis ranges from -3 to 2.5, and the y-axis ranges from -2.5 to 2.5. The points are colored green or red. There are approximately 70 green points and 30 red points. The green points are more widely distributed, while the red points are more concentrated in the central region, particularly around the origin and slightly to the right. The overall distribution is roughly circular but shows a slight bias towards the right side of the plot.

## Straightness
